

PROJECT SUMMARY

Northstar Gardens is a fictional urban-gardening study based in Kolkata. The project started on April 15, 2025. The team planted herbs on four rooftops and measured soil moisture every week for twelve weeks.

RESULTS AND RECOMMENDATIONS

Main finding: rooftop gardens reduced afternoon indoor temperatures by an average of 2.4 degrees Celsius. Rainwater collection reduced tap-water use by 30 percent. The report recommends repeating the study during monsoon season.
